

Educational Outreach Water Conservation Program

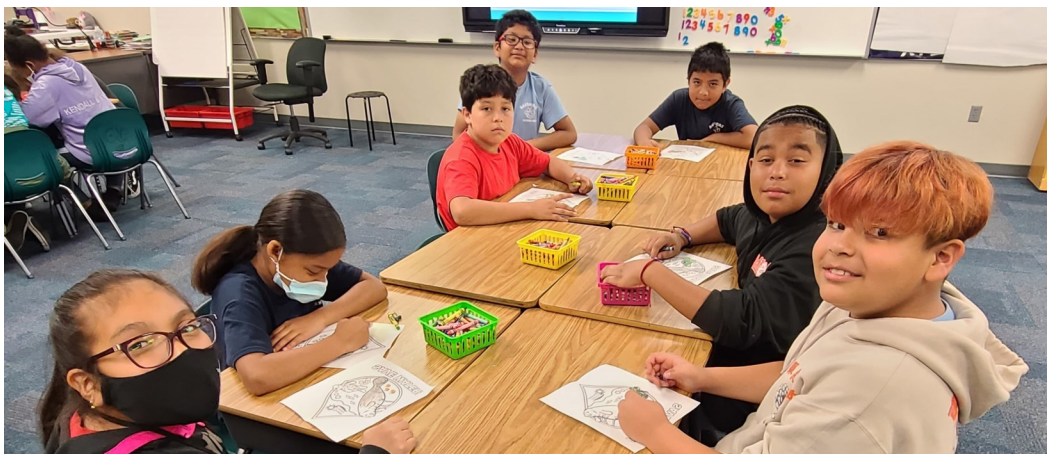

**Schedule a classroom visit by the Manatee County Water Conservation Program!
Presentations include educational hands-on activities and take home materials.**

The enviro-scape model helps students understand the sources and prevention of water pollution through visual hands-on interaction.

Students can create their own water cycle bracelet. Each bead represents a different stage or element of the cycle, incorporating evaporation, transpiration, condensation, precipitation and percolation and the role of solar energy.

Color-ons are a FUN activity! Kids create their own T-shirts and just by wearing it they can spread the message on how important it is to save water.

Our Water Conservation Educators will work with you to provide the program that best fits your current curriculum. The target audience is 3rd-6th grades, however, we have activity books, study guides, and educational items available for students of all ages to use in the classroom and to take home and share water conservation lessons with their families.
